Introductory note

This introductory note does not form a part of the permit

The main features of the permit are as follows.

This is a Tier 3 bespoke permit consisting of:

- standard rule set SR2008 No9 – asbestos waste transfer station. All conditions relevant to this activity are contained within that rule set.
- and:
- a bespoke non-hazardous household, commercial and industrial (HCI) waste transfer station activity. All conditions relevant to this activity are contained within this document.

The following describes the limits relevant to the bespoke HCI transfer activity.

Treatment may be by either mechanical and/or manual methods. Waste can be bulked up for disposal or recovery elsewhere and can be treated by sorting, separation, screening, bailing, shredding, crushing and compaction for recovery or disposal.

The maximum quantity of waste that can be accepted and processed on site as part of the HCI transfer activity, shall not exceed 150,000 tonnes per year.

Relevant storage and treatment capacity thresholds have been included in the permit to reflect the legal waste facility operational limits; above which, the site would be operating as an Industrial Emissions Directive installation. (See Table S1.1 for relevant limits.)

This permit does not allow any point source emission into surface waters or groundwater except:

- clean, rainfall dependant drainage from areas of the site not used in connection with the storage and/or treatment of waste, and
- run-off from the impermeable surface from external areas of the site used to store and/or treat waste.

There are to be no emissions to surface and/or groundwater from the buildings on site.

All emissions from the activity which are not controlled via actual emission limits are controlled through the 'emission of substances not controlled by emission limits condition' and all relevant process requirements set out in Tables S1.1 and S1.2.

The burning of any wastes, either in the open, inside buildings or in any form of incinerator is not permitted.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.
