

## **NON TECHNICAL SUMMARY**

### **General Introduction:**

The site receives household, commercial and industrial waste. The permit variation is required to extend the site boundary.

Following pre application advice from Anthony Bruten and Louise Bailey on Thursday 5<sup>th</sup> May 2016, we would like to apply for a fee abatement for the variation fee.

All recyclable materials will recovered with the aid of mechanical plant.

Waste is manually and mechanically treated in line with the relevant legislation and published Natural Resource Wales and Government Guidance.

GD Environmental Services have an internal Environmental Management System that is accredited to ISO14001.

Personnel working at the site are appropriately trained to ensure the effective operation of the site. A number of personnel on site have Certificate's of Technical Competence in the Treatment & Transfer of hazardous and non hazardous waste.

### **Risk Assessment:**

The risk assessment associated with the operations on site has considered all potential risks from the site and identified mitigation measures for odour, noise and vibration and fugitive emissions will not have any significant impact on the environment.
