Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

This variation allows the generation capacity of each engine to be increased to 3.6MW from the previous capacity of 2.99MW. This thereby increases the total capacity of the installation from 80.73 MW to 97.3 MW. The emission points are also brought together into 6 stacks.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
