Dear Sirs

Re : SR2010/8 Tier 2 Bespoke Permit – Herbert Road, Newport

Further to our recent meeting on site with Mr Anthony Bruten of your Monmouth Office, please find enclosed our completed application forms in respect of the above. Also enclosed is the credit card form in respect of the fee for this application.

As discussed with Mr Bruten, we would like to apply for the permit based upon two sources of material for the filling operation at the site. The adjacent stockpile of material incorporated within the application area has been tested and found to be clear of all contaminants, other than minute traces of asbestos fibres, all bar one of the tests found to be below the 0.001% detection rate for classification as non-hazardous waste. It is our intention to raise the levels on the adjacent site utilising this material and then provide a clean cap of 1m above. We have applied to the planning liaison department of NRW, Mr Andrew Hurst, via our Geotechnical representatives Terra Firma and the local Authority for permission to utilise the material this way.

However in the event that permission is not forthcoming we intend to import clean inert material to raise the site levels in accordance with the planning consents achieved, therefore we require this application to cover such activities.

We trust the above information is sufficient however if you have any questions, please contact the writer on 07772 707310 or darranwatts@riversee.co.uk
