Introductory note

This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

This is a minor technical variation allowing the operator to add a de-foaming agent to their treated effluent before discharge to the river Tywi. The dosing is at a very low concentration of approximately 2 parts per million.

The schedules specify the changes made to the original permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
