Schedule

Emissions to Air

1. Based on the responses to the previous Schedule 5 Notice, received on 22 March 2018, a new emission point to air will be added as a result of the permit variation. Please can you provide details about it, including the emission point reference and location, source, parameter, quantity unit and unit as required by section 2 of Part C3 of the application form. Please also provide an updated copy of the form, accurately reflecting the proposed variation.
2. Please can you confirm what abatement will be in place for the new emission point.
3. Will A13 (Diesel jet wash exhaust) currently listed in Table 2.2.1 of your permit be relocated with the vehicle wash?
4. The site plan in the current permit shows emission points to air. This will need to be updated to account for the new emission point. Please can you update the site plan already provided to show the location of all emissions to air.

Environmental Risk Assessment

5. The Environmental Risk Assessment provided with your application does not include an assessment of the new emissions resulting from the variation. Please update your ERA to consider all new emissions.
6. A H1 assessment must be completed as there will be new emission points to air, sewer and surface water as a result of the variation.

Operating Techniques

7. The operating techniques need to be updated to accurately reflect the addition of the extrusion plant and the way in which it will operate. For example section 4.1.1 states there will be no point source emissions to air and 4.2.1 states there will be no new point source emissions to surface water, as a result of this variation. Please update the techniques to reflect the proposed variation.
