Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

This variation incorporates the changes to the boilers to incorporate dual fuel burners which will primarily burn Liquified Natural Gas with back up being the use of light fuel oil. This also includes the additional infrastructure for the storage of the Liquified Natural Gas. The burning of LNG gives significant improvements to the emissions to air over the previously burned light fuel oil.

In addition this variation incorporates changes to the refrigeration process to a glycol based system, incorporating a 4,700 litre glycol tank.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
