Form ~~64~~ Question 3B:

It is not possible to connect into the sewerage system as the closest system is situated in usk Village which is approximately 5 miles away from the property, there is no trunk sewer closer than usk and as such is infeasible. There is also a topography issue with the location of the kennels as they are lower than any surrounding sewer and as such a rising main pumping scenario would be required and at this length would run into millions to install.
