Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

The Industrial Emissions Directive (IED) came into force on 7th January 2014 with the requirement to implement all relevant BAT conclusions as described in the Commission Implementing Decision. The non-ferrous metals industries BAT conclusions were published on 30th June 2016 in the Official Journal of the European Union following a European Union wide review of BAT.

This variation incorporates the changes required by the Industrial Emissions Directive following a statutory review of permits in the production of non-ferrous metals sector. This includes amendments to the wording of several permit conditions relating to notifications, a condition relating to the requirement for monitoring of groundwater, soil and relevant hazardous substances required by IED has been added. The Energy Efficiency Directive and Water Framework Directive were also considered as part of the Regulation 60 response. At the same time the permit has been converted into the current EPR Permit format.

At the same time as the BAT review the operator also applied for a normal variation to make a number of changes at the plant. A new mixer and extruder machine has been installed as well as a new process called the LMC. Due to these process changes air emissions have been significantly reduced and a number of emission points altered, added or removed.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number
