Permit number EPR/YP3930EX

Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

This variation adds a Cogeneration Plant to the existing refinery operations and consolidates the permits. The plant is a 137 MW(th) natural gas fired cogeneration plant. This will produce up to 49.9 megawatts of electrical output (MWe) from the combustion of natural gas in a combustion turbine generator (CTG). Superheated steam will be generated via a heat recovery steam generator (HRSG) and will supplement the refineries steam demand. The plant will be connected to the refinery's steam infrastructure as well as the natural gas and electrical distribution systems. There is a de-mineralisation plant associated with the cogeneration plant to provide a flow of softened and filtered water to allow on-line and off-line washing of the CTG. Neutralised regeneration fluid will be routed from the unit to the existing waste water drain line and refineries waste water treatment plant.
