

WASTE ACCEPTANCE PROCEDURE

Waste Acceptance

The procedure that shall be adopted at site is detailed below

1. Loads will arrive on site. All loads accepted are pre-booked orders and are allocated a job number specific to the client and instruction.
2. Documentation is checked, and waste examined for non-permitted wastes, quality and conformance with the requirements outlined within the Environmental Permit.
3. If the waste does not conform to requirements, it will be refused. A record will be kept of all non-conforming loads.
4. Waste loads shall be unloaded using a forklift truck or a pallet truck. Smaller loads may be unloaded manually.
