Measures taken, or intended to be taken, to prevent a recurrence of the incident	Due to the continuing problems with achieving compliance with the permit limit for particulate emission from this release point, the operation of the process with respect to the cooling zone has been reviewed. From this study it is believed that increase recycling of reclaimed wool into the process has increased the burden of dust in the air stream extracted from the cooling zone. Therefore, the design of the abatement in this area is to be reviewed with the aim of increasing its effectiveness and improving the engineering control of particulate emissions. In the meantime, frequency of routine cleaning of the equipment and changing the water used in the impact sprays has been increased.
