Any more accurate information on the matters for notification under Part A.	As referenced on the Part A Notification
Measures taken, or intended to be taken, to prevent a recurrence of the incident	<p>Following completion of the raw materials trial (associated with the HCl investigation from Emission Point A Cupola Stack After Oxidiser), the alternatively sourced dolomite (which was used for the trial) was subsequently mixed with the regular dolomite in order to deplete the supply, which subsequently gave rise to a slight increase in SO₂ levels on the identified day. This was a trial dolomite used for direct comparison and is not intended for future use.</p> <p>An internal Change and Trial Request Form (Knauf Group Form KI_F_011) is completed and approved prior to the commencement of any trial. It identifies the trial description and goals; the trial team members; the trial protocol (i.e. how the trial will be conducted) and references the documents / information that are applicable and need to be considered for the trial. For this trial, the environmental assessment was applicable and recipes were updated, however for any future trials involving an alternatively sourced existing raw material, consideration will be given, by the Knauf Geologist, to the acceptability of mixing existing and trial raw materials upon completion of the trial in relation to supply depletion.</p>
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	It is believed that no permanent harm will result from the incident.
