Subject: Tru Sweet Corrective Action - Completed

Hi Aled,

Further to the Tru Sweet incident we received the following corrective action:

The site should investigate the feasibility of fitting a level monitoring alarm (s) or some method of monitoring the inventory of the Glucose-Fructose syrup tank in order to detect losses from this asset more rapidly in future.

This action has now been completed and we have installed software to detect a reduction in tank weight which is faster than normal usage for production. Initially this will indicate on the plant in touch systems to alert operators. Furthermore we have cables installed for a flashing / audible beacon to be installed over the door to the tank room, and a reset button on the platform in the room. This will be the only way to reset the alarm, making sure personnel must enter the room to acknowledge.

Kind regards

Nia
