Dear Nia,

Environmental Permitting Regulations (England and Wales) 2016. Variation of EPR-BV8016ID to include new extrusion production process.

Kellogg's Wrexham have submitted a normal variation to Natural Resources Wales (NRW) to vary environmental permit EPR-BV8016ID to include a new extrusion production process.

Following our telephone conversation on 10th August 2017 it is likely that commissioning and operation of the new extrusion production process will commence prior to the determination of the permit variation by NRW. As such Kellogg's Wrexham are requesting permission to operate the new extrusion production process with: -

New raw material weighing
New extrusion process via two extruders
New dryer
New coating plant
New transfer to the tank floor area
New emission points to air from four new Rotoclone units
New packing line and palletiser

NRW agree to the operation of the new extrusion production process using the above configuration and techniques submitted as part of the application during the permit variation determination period, for a maximum period of 3 months from the date of this letter.

This agreement must not be interpreted as a presumption to issue the permit variation and does not preclude NRW from taking enforcement action if pollution occurs from the operation of the new process.

Yours sincerely

SMcGregor-Andrew
