

SUBSTITUTION OF LEAD STABILISER REPORT 2014 – REHAU LTD, AMLWCH PPC PERMIT BX6421IY

Response:-

We have reduced our lead stabiliser usage to 0.0063t/t uPVC Product, which is equivalent to 331kgs per annum.

Corrective Action :-

- a) The gradual change over from lead to calcium zinc continued during 2014 with all articles having been converted by the end of the year.

A small stock of lead remains on site which will either be transferred to another REHAU site located outside of the UK or disposed of as Hazardous Waste.

The site will become lead free during 2015.
