

Doc B2.3 – Management systems

The operators do not currently have environmental management systems meeting the conditions set out in the in the Horizontal Guidance Note H6 – Environmental Management Systems.

The operators are aware of most the installations environmental impacts arising from their activities and requirements of relevant environmental legislation. Some control procedures have been established, implemented and documented especially where these are related to food hygiene, but generally its systems will not fully meet the standards for planning, implementing and reviewing its environmental performance in the manner required for larger operations.

The operators have indicated they would prefer to establish an externally certified EMS and support is likely from the other permitted and EMS certified installations in the Cranswick group.
