

Doc B3.8 Raw and other materials, other substances and water that will be used

The operators will continue to use the installation for the manufacture of chilled and frozen ready-to-eat foods probably wholly for Wm Morrison Supermarkets PLC.

The installation is currently a jointly owned and operated subsidiary of Wm Morrison Supermarkets PLC who have a controlling interest and Cranswick PLC. The installation has been processing and packing cooked-chilled meats for several years and further physical expansion of the site and buildings and introduction of additional processing equipment will increase its capacity to 75 tonnes per day. The operators anticipate quantities of raw materials used including meat, other food ingredients, water and other substances (E.g. cleaning chemicals, etc) will continue to increase year on year. Energy (E.g. natural gas and electricity) and water used will also increase and the operators anticipate improvements in utility efficiency (E.g. KWh/tonne, m3/tonne, etc).
