

**SUBSTITUTION OF LEAD STABILISER REPORT 2016 – REHAU LTD,
AMLWCH PPC PERMIT BX6421IY**

Response:-

All articles have now been converted to calcium zinc from lead stabiliser. The site did not use any lead during 2016. All articles have been converted from using lead to calcium zinc as the stabiliser

Corrective Action :-

There is still a small qty of 150kgs of lead stabiliser on site which will be disposed of during the next Hazardous Waste Collection. Checks have been made with other REHAU sites located outside of the UK to see if they could use the stabiliser however none were interested as they have also removed lead from their process.
