Part B

Any more accurate information on the matters for notification under Part A.	<p>The levels in LC1 have fluctuated between 8.82m and 0.85m during July. However the transducer readings have generally been compliant, indicating perched leachate is setting off the dip tape. The results are an improvement on the previous month.</p> <p>LC2 has been consistently below compliant levels throughout this reporting period. This is an improvement compared to the June results.</p> <p>The levels in LC3 were initially dry until the 30<sup>th</sup> July when 2.38m was recorded. The pump was checked and found to be working albeit at a slow flow rate. However, we have since replaced the pump and this should be brought back under compliance during August.</p> <p>During July 1230 m3 of leachate was removed from site for treatment. 123.57 m3 of this was taken to Brookhill Landfill as part of a treatment trial.</p>
Measures taken, or intended to be taken, to prevent a recurrence of the incident	See above.
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment or harm which has been or may be caused by the emission	None – no pollution or harm has occurred.
The dates of any unauthorised emissions from the installation in the preceding 24 months.
