Measures taken, or intended to be taken, to stop the emission	N/a, as all the evidence indicates that these results are not due to the site.					

**Part B**

Any more accurate information on the matters for notification under Part A.	Borehole 12B(B) is 300+ metres away from the site, on the side of the slip road to the A483 dual carriageway. It is highly unlikely that an emission is occurring, as ammoniacal nitrogen is compliant.
Measures taken, or intended to be taken, to prevent a recurrence of the incident	No intended action is deemed necessary at this time. We will review the next few sets of results. The results remain sporadic and until any increasing trends are confirmed across a range of leachate-indicating substances, these results should be viewed as representative of background concentrations and/or weather events.  The permit limit has been raised to 450 mg/l for borehole 12 due to historical results; however as background concentrations continue to vary this may need to be reviewed again in future.
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment or harm which has been or may be caused by the emission	N/a
The dates of any unauthorised emissions from the installation in the preceding 24	See previous Schedule 6 reports.
