Introductory note

This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

The changes made in this variation are due to a request by the operator to replace a wet acidified counterflow scrubber on emission point A7 with a low temperature catalytic oxidiser. Table 2.1.1: Operating techniques has been altered to include documentation submitted as part of this variation application, and Table 2.2.1: Emission points to air has been altered to include details of the new catalytic oxidiser.

The schedules specify the changes made to the original permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
