DUST MANAGEMENT PLAN

1.0 PRINCIPLE

This section outlines the general procedures for dust management at the Atlantic Trading Estate Waste Transfer Station. The purpose of this procedure is to ensure that any site operative working on site is aware of the procedures for the management of dust.

2.0 SCOPE

This procedure covers the management of dust at the facility.

3.0 RESPONSIBILITY

All site operatives are responsible for carrying out the procedures as detailed in Section 4 below. Any changes required are the responsibility of the Site Manager or designated person to update and re-issue the amended procedure.

4.0 PROCEDURE

4.1 Dust Control and Minimisation Strategies

Due to the nature of the wastes accepted at the facility it is not anticipated that excessively dusty waste will arrive at the facility. However, all site operatives must follow the mitigation measures proposed below.

A number of measures will be taken in order to minimise the dust emissions from the site.

These include:

- Wastes consisting solely or mainly of dusts, powders or loose fibres will not be accepted at the site;
- Speed limits will be implemented for vehicles using the site;
- Site access and operational areas will be maintained and repaired to minimise emissions of dust due to uneven and poor surfacing;
- All waste treatment activities will take place within the confines of the Waste Operations Buildings;

		Version: 1 Effective: July 2021
Authored by: WRAP Cymru Date: July 2021	Reviewed by:	Approved by:

- All roads and operational areas will be swept where necessary to reduce dust emissions;
- Daily, visual inspection at all areas of the site and site boundary will be carried out by site personnel;
- In the event that significant visual dust is observed at the boundaries of the operational areas, action will be taken to suppress the dust. This is likely to comprise use of a mobile bowser or spray to dampen the surfaces;
- A record of the inspection findings and remedial action taken will be made in the site diary;

Visual inspections will be carried out by the Site Manager and site operatives during the working day, especially during dry and windy conditions. The site manager would assess the need for remedial action and implement such action where necessary.

5.0 HEALTH & SAFETY

All site operatives will work with due regard to all relevant Health and Safety Regulations currently in existence relevant to operations on site. All site operatives have a duty of care to report anyone who does not comply with the relevant Health and Safety Regulations to the Site Manager.
