Subject: Solutia UK Ltd, Newport Chemical Complex – EPR Permit Number: BR9715IB
IC33 - PCP Reduction update

Further to previous correspondence and discussions on the IC33 Permit Improvement Item, this letter is to; advise on the current status, and also update on the associated timescales of when the project is envisaged to be completed. It is also to acknowledge that the projected timescale previously communicated (end of 2018) will not be met

The previous update on this item detailed the status following receipt of the conceptual design documentation. Since then, further works & tests have been undertaken, and we are now in receipt of a detailed design which incorporates a number of design changes compared to the original. This work, in conjunction with some administrative issues have resulted in a delay to the project implementation, but providing no significant further modification are required to the design plan, it is anticipated that the main items of plant should be in-situ in Q2/2019
