Ref. EPR/BP3635MR/V004 Harsco Environmental Port Talbot Site

Dear [REDACTED]

Please find enclosed the quarterly returns for the Harsco Environmental PPC Permit at the Tata Steel Port Talbot Establishment. The data provided is for the months of January - March 2022 inclusive. On the 26<sup>th</sup> and 27<sup>th</sup> January there were breeches exceeding the 20 mg/m<sup>3</sup> limit.

Our Wi-Fi link at the booth to the monitoring software was down and we were waiting for IT to repair the link which was repaired on the 14th Feb. I was unaware of the exceedance due to this hence the late Schedule 5 Notification.

Element completed a Stack Emission Test on the 31<sup>st</sup> January which was satisfactory and within the 20 mg/m<sup>3</sup> limit. This would explain the exceedance identified in the compliance report.

Currently the Lancing booth is functioning soundly and well within the exceedance 20 mg/m<sup>3</sup> limit.

.

Yours Sincerely

[REDACTED]
