Further, more accurate information on the matters for notification under Part A.

On the 11th January 2022 the management information system indicated that the NO_x emissions from the incinerator averaged 406.6mg/m³ over a 24 hour period, against an emission limit of 400mg/m³.

Unstable running conditions on the incinerator during the 10th and 11th February 2022 had led to a stop/start situation. The control of the NO_x emissions during start-up relies on the quantity of steam purge through the burner nozzle and this is not always identified quickly enough during the four-hour adjustment period.

Measures taken (or intended to be taken) to prevent a recurrence of the incident.

This issue has been identified with the operators before with the resultant repeat of the awareness needed to ensure that the incinerator operation is carried out within the permit emission limits.

Measures taken (or intended to be taken) to rectify, limit or prevent any pollution of the environment or harm which has been or may be caused by the emission.

It is thought that there was no measurable environmental impact as a result of this incident/emission.

Dates of unauthorised emissions from the installation in the previous 24 months.
