## **Schedule**

We need more information to assess the suitability of your proposed containment and drainage systems for the new silos for milk, cream and whey.

Please provide:

- 1) Detailed modelling and a report on the impacts in the event of a catastrophic failure of the proposed primary containment of the new silos. The modelling and report should consider (but not be limited to) the following:
  - a. Maximum possible distance of travel of each substance (milk, cream and whey) from the new silos
  - b. Maximum flow rate of each substance
  - c. The ability of the exiting drainage to prevent discharge of the substance from leaving the site boundary and ability to divert the substances to the effluent treatment plant.
  - d. The maximum flow rate that the drainage gully at the site entrance can drain
  - e. The possibility for any of the substances to reach the Merlin's Brook (or any other watercourse) in the event of failure of the new silos (with evidence to back up)
  - f. Impacts of rainfall (including event of heavy rainfall) on points a-e.
- 2) A copy of the H1 risk assessment that was submitted as part of the improvement condition (IC11) referenced in previous correspondence.

**END OF SCHEDULE.**
