Any more accurate information on the matters for notification under Part A.	During the time of the breaches trim delays were experienced. This means the furnace roof is open with power off and post combustion may not be completed. In addition, oxygen was re-blown into the EAF to refine the liquid steel. This additional oxygen reacts with available carbon to form CO. Alongside this were delays in the process, these delays can result in the EAF power being off which does not allow for post-combustion of CO to be realised.
