To: Mr. Toby Griffiths

Regulatory Officer

Cyfoeth Naturiol Cymru / Natural Resources Wales

20th March 2019

Toby.

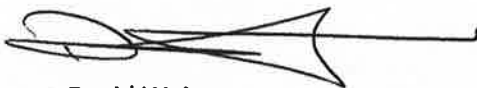

During a site visit by yourself to Centrica Barry Power Station at the end of last year, I indicated to you the probable flight path of the asset with regards to future operation and the potential cessation of generation activities by the 1st April 2019.

Centrica's now agreed route is that we shall conclude electrical generation at the end of our Short Term Operational Reserve (STOR) period, 31st March 2019. Post completion of the STOR contract we here on site will focus on making the asset inert with respect to gas and electrical isolation. It is anticipated that this phase will conclude by 10th May 2019, at this point, we will formally hand over the asset to Centrica Project team who are scoping and phasing the demolition of the asset which is planned to commence in June 2019.

Would you be available for a site visit and tour on the following dates?

3rd, 4th or 5th April 2019. Both Andrew Martinson and Lorraine Dolman will be on site and will facilitate.

Yours sincerely

David Waite

Generation Manager

Centrica Barry Power Station
