

Site Licence No. 24

WORKING PLAN

1. A cabin will be located on the site to be used as a site office.
2. The site will be manned and supervised at all times of operation.
3. The gate will be kept locked outside of operating hours. British Rail personnel frequently patrol the area over 24 hours.
4. Each load will be examined for compliance within the terms of the licence and a Controlled Waste Transfer Note will be issued for each consignment.
5. Any unsuitable material found in a load after tipping will be segregated and removed from the site on a fortnightly basis.
6. Two site roads will be used, one for the use of cars travelling to the site office and the other for heavy lorries using the site.
7. The roads leaving the site will be kept free from debris and a simple water pit will be used for wheel cleaning. A caterpillar excavator will be used for levelling the waste.
8. I intend to restore the site by covering the area with 12-18 inches of good quality topsoil which will be reseeded. Final restoration levels are indicated in the attached diagram.
