### **Introductory note**

**This introductory note does not form a part of the notice.**

The following gives notice of the substantial variation and consolidation of an environmental permit.

The substantial variation consolidates previous variations, updating the permit to a new format

A new conditioned activity and associated European Waste Codes (EWCs) have been added to the permit to include an Asbestos Picking Station to process asbestos contaminated soils (with or without hydrocarbon contamination) and construction/demolition wastes to complement existing operations onsite.

Additional EWCs have also been included to allow the transfer of soils from the Asbestos Picking Station to the onsite asbestos cell, and to allow acceptance of soils from the Asbestos Picking Station to the Multipurpose Waste Treatments and Remediation Pad facility.

We have also corrected some errors in the previous version of the permit during the variation and consolidation process.

The schedules herein specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number and is included in this notice.

## **Schedule 1**

All conditions have been varied during the substantial variation and consolidation of the permit. The principle changes are as follows,

The addition of condition 2.4.4 to cover the Asbestos Picking Station and associated operations. This resulted in the following,

- Table S1.1 has been updated to include the new operational activity referenced as A3.
- The addition of Table S2.6, *Permitted Waste Types for Asbestos Picking Station* with EWCs 17 05 03\*, 17 05 04, 17 06 05\* and 17 09 03\*.
- New Table S1.4, *Annual Waste Input Limits* has been included that specifies an annual waste input limit for the Asbestos Picking Station.

Table S2.4, *Permitted Waste Types for Disposal in the Asbestos Cell*, has been updated to include EWCs 19 12 11\* and 19 12 12.

Table S2.5, *Permitted Waste Types for the Multipurpose Waste Treatment Facility*, has been updated to include EWCs 19 12 11\* and 19 12 12.

Table 3.2, has been corrected. Oxides of nitrogen from the Gas Utilisation Plant for emission point reference locations T2G2, T2G3, T2G4 and T2G5 (reference T2G5 supersedes T1G2 in version 010 due to an administrative error) have been reinstated to 500 mg/m<sup>3</sup> to correct an error that had manifested between versions 008 and 009 of the permit.
