Condition 3.19/Cefas Advice Letter/Reference 1955v2/Point 15. Major comment (action): As THC levels remain reduced from those observed in the 2016 sampling campaign, at which time material was deemed acceptable for disposal at sea, I am cautiously content that the results should not preclude material from continued disposal at sea at the present time. However, In the absence of PAH data, which were recommended in Cefas' preapplication advice under SP2201, and considering the increase observed in the THC levels from the last round of sampling, Cefas strongly recommend that material from across the dredge areas is analysed for PAHs in one year's time (in addition to the sampling currently prescribed for 2025 on the present licence). Alternatively, the licence holder may submit PAH results from the present samples, if possible, which Cefas will be happy to review to provide a more confident conclusion.

Please provide a description of your request e.g. Construction Environment Management Plan submitted for approval prior to commencement of works/ submission of annual monitoring report for approval
