Dusk emergence/dawn re-entry surveys

Trees

- 1.6.6.9 Dusk emergence and dawn re-entry surveys were undertaken for trees where either:
- Detailed inspections were not possible
 - Trees had moderate or high suitability for roosting bats
 - Trees were identified as having confirmed roosts.
- 1.6.6.10 A single dusk emergence survey was undertaken for seven trees that were not safe to climb, and two trees that were confirmed as a bat roost following the GLRA or aerial tree inspection.
- 1.6.6.11 The dusk emergence surveys undertaken on trees that were of moderate or high suitability recorded two unidentified bat species emerging from one tree. The dusk emergence surveys undertaken on trees previously confirmed as roosts identified a minimum of three noctules emerging from one of the trees. Both trees were located within the Mona Onshore Development Area.
- 1.6.6.12 The trees subject to dusk emergence and dawn re-entry, along with the results are shown in Figure 1.45 below.

Buildings and structures

- 1.6.6.13 Structures identified as moderate or high suitability for roosting bats required dusk emergence and dawn re-entry surveys.
- 1.6.6.14 One dusk emergence survey was undertaken on one structure identified as having high suitability for roosting bats. The dusk emergence survey recorded no bats emerging from the building.
- 1.6.6.15 The structures subject to dusk emergence and dawn re-entry, along with the results are shown in Figure 1.45 below .

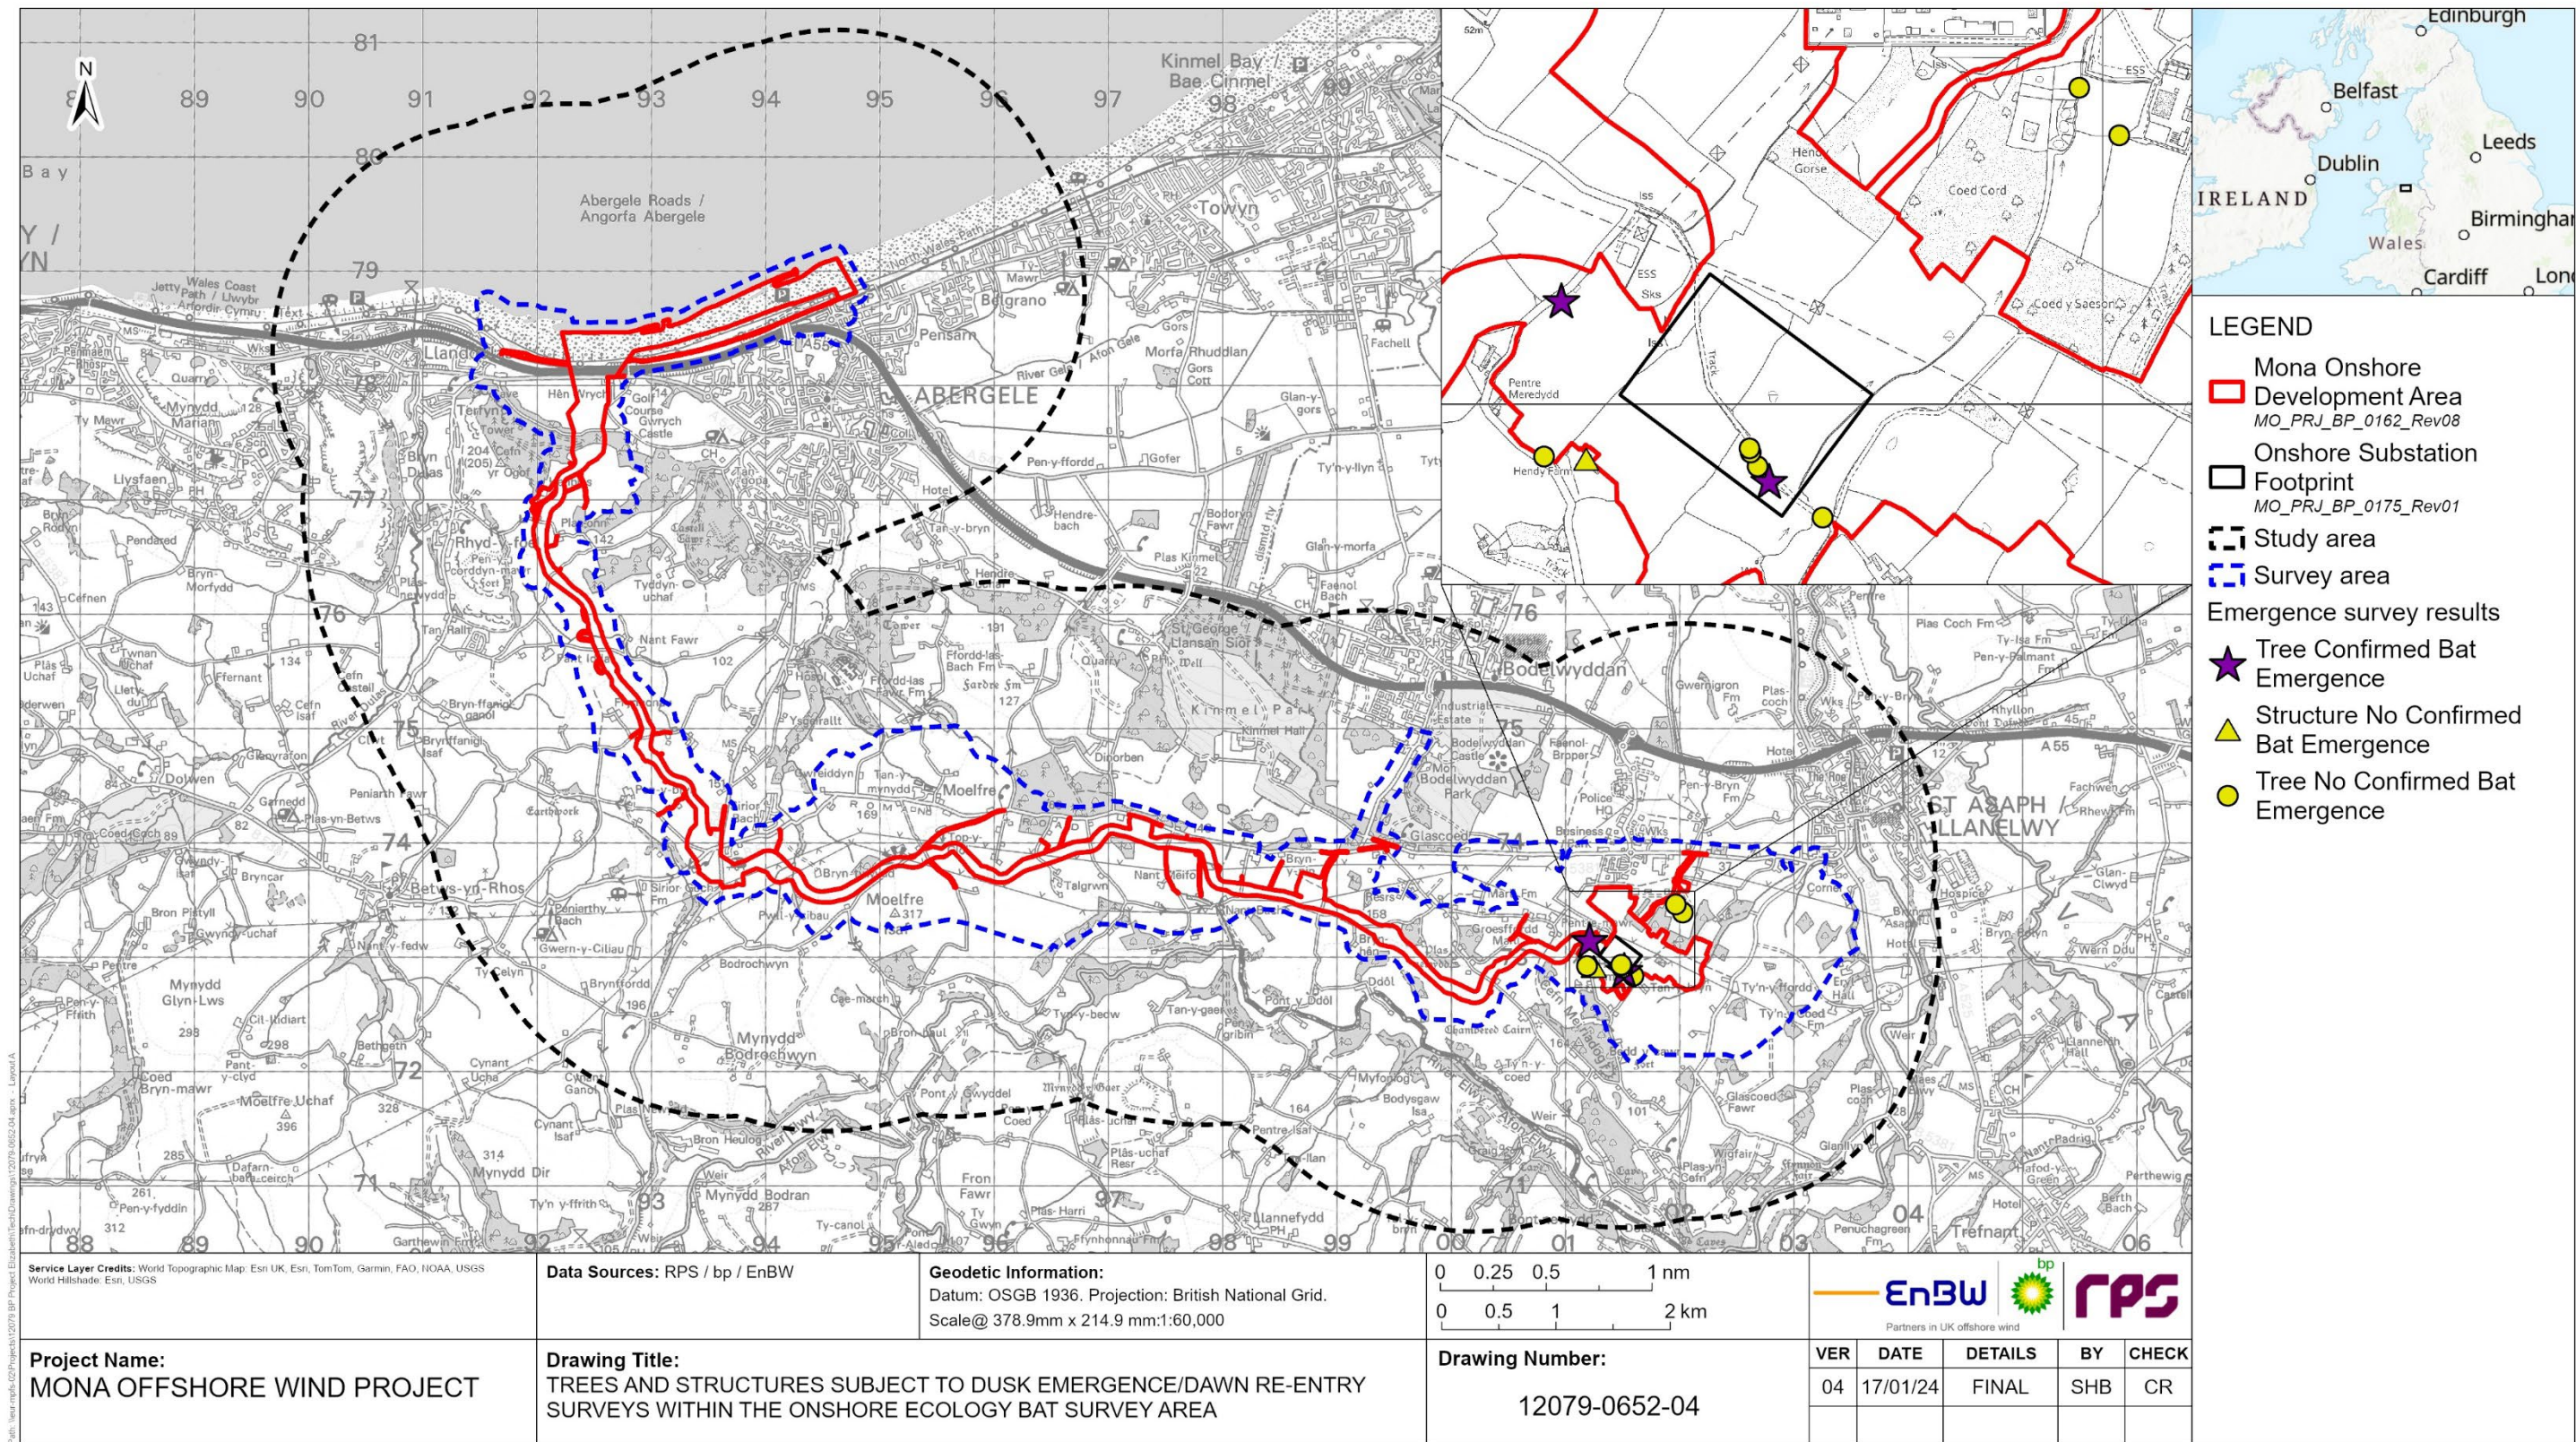

Figure 1.45: Trees and structures subject to dusk emergence/dawn re-entry surveys within the bat survey area.

MONA OFFSHORE WIND PROJECT

Summary of roosts from all survey types

1.6.6.16 Fourteen bat roosts were identified during site-specific surveys. A summary of the bat roosts identified within the bat roost survey area is shown in Table 1.6 and Figure 1.46 below.

Table 1.6: Summary of bat roosts identified within the bat roost survey area and Mona Onshore Development Area.

Tree species/ structure type	X coordinate	Y coordinate	Bat species	Roost type	Number of bats	Within Mona Onshore Development Area
Oak <i>Quercus robur</i> – bat box	302000	373324	Pipistrelle	Day	1	Outside
Sycamore <i>Acer pseudoplatanus</i>	292358	375836	Pipistrelle	Day	1	Outside
Oak	301513	372889	Noctule	Day	3	Within
Oak	302568	373127	Natterer's bat	Day	1	Outside
Oak	301629	372807	Soprano pipistrelle	Day	1	Outside
Ash <i>Fraxinus excelsior</i>	301276	372868	Noctule	Day	1	Outside
Oak	301936	372801	Soprano pipistrelle	Day	1	Within
Sycamore	292288	378066	Natterer's bat	Day	1	Outside
Oak	299787	372980	Pipistrelle	Day	1	Outside
Oak	301969	373466	Pipistrelle	Day	1	Outside
Oak	298940	373795	Soprano pipistrelle	Day	Droppings only	Outside
Oak	292874	374918	Unknown	Unknown	Droppings only	Outside
Oak	301195	373155	Unknown	Day	2	Within
Oak	302915	373281	Pipistrelle	Day	1	Outside

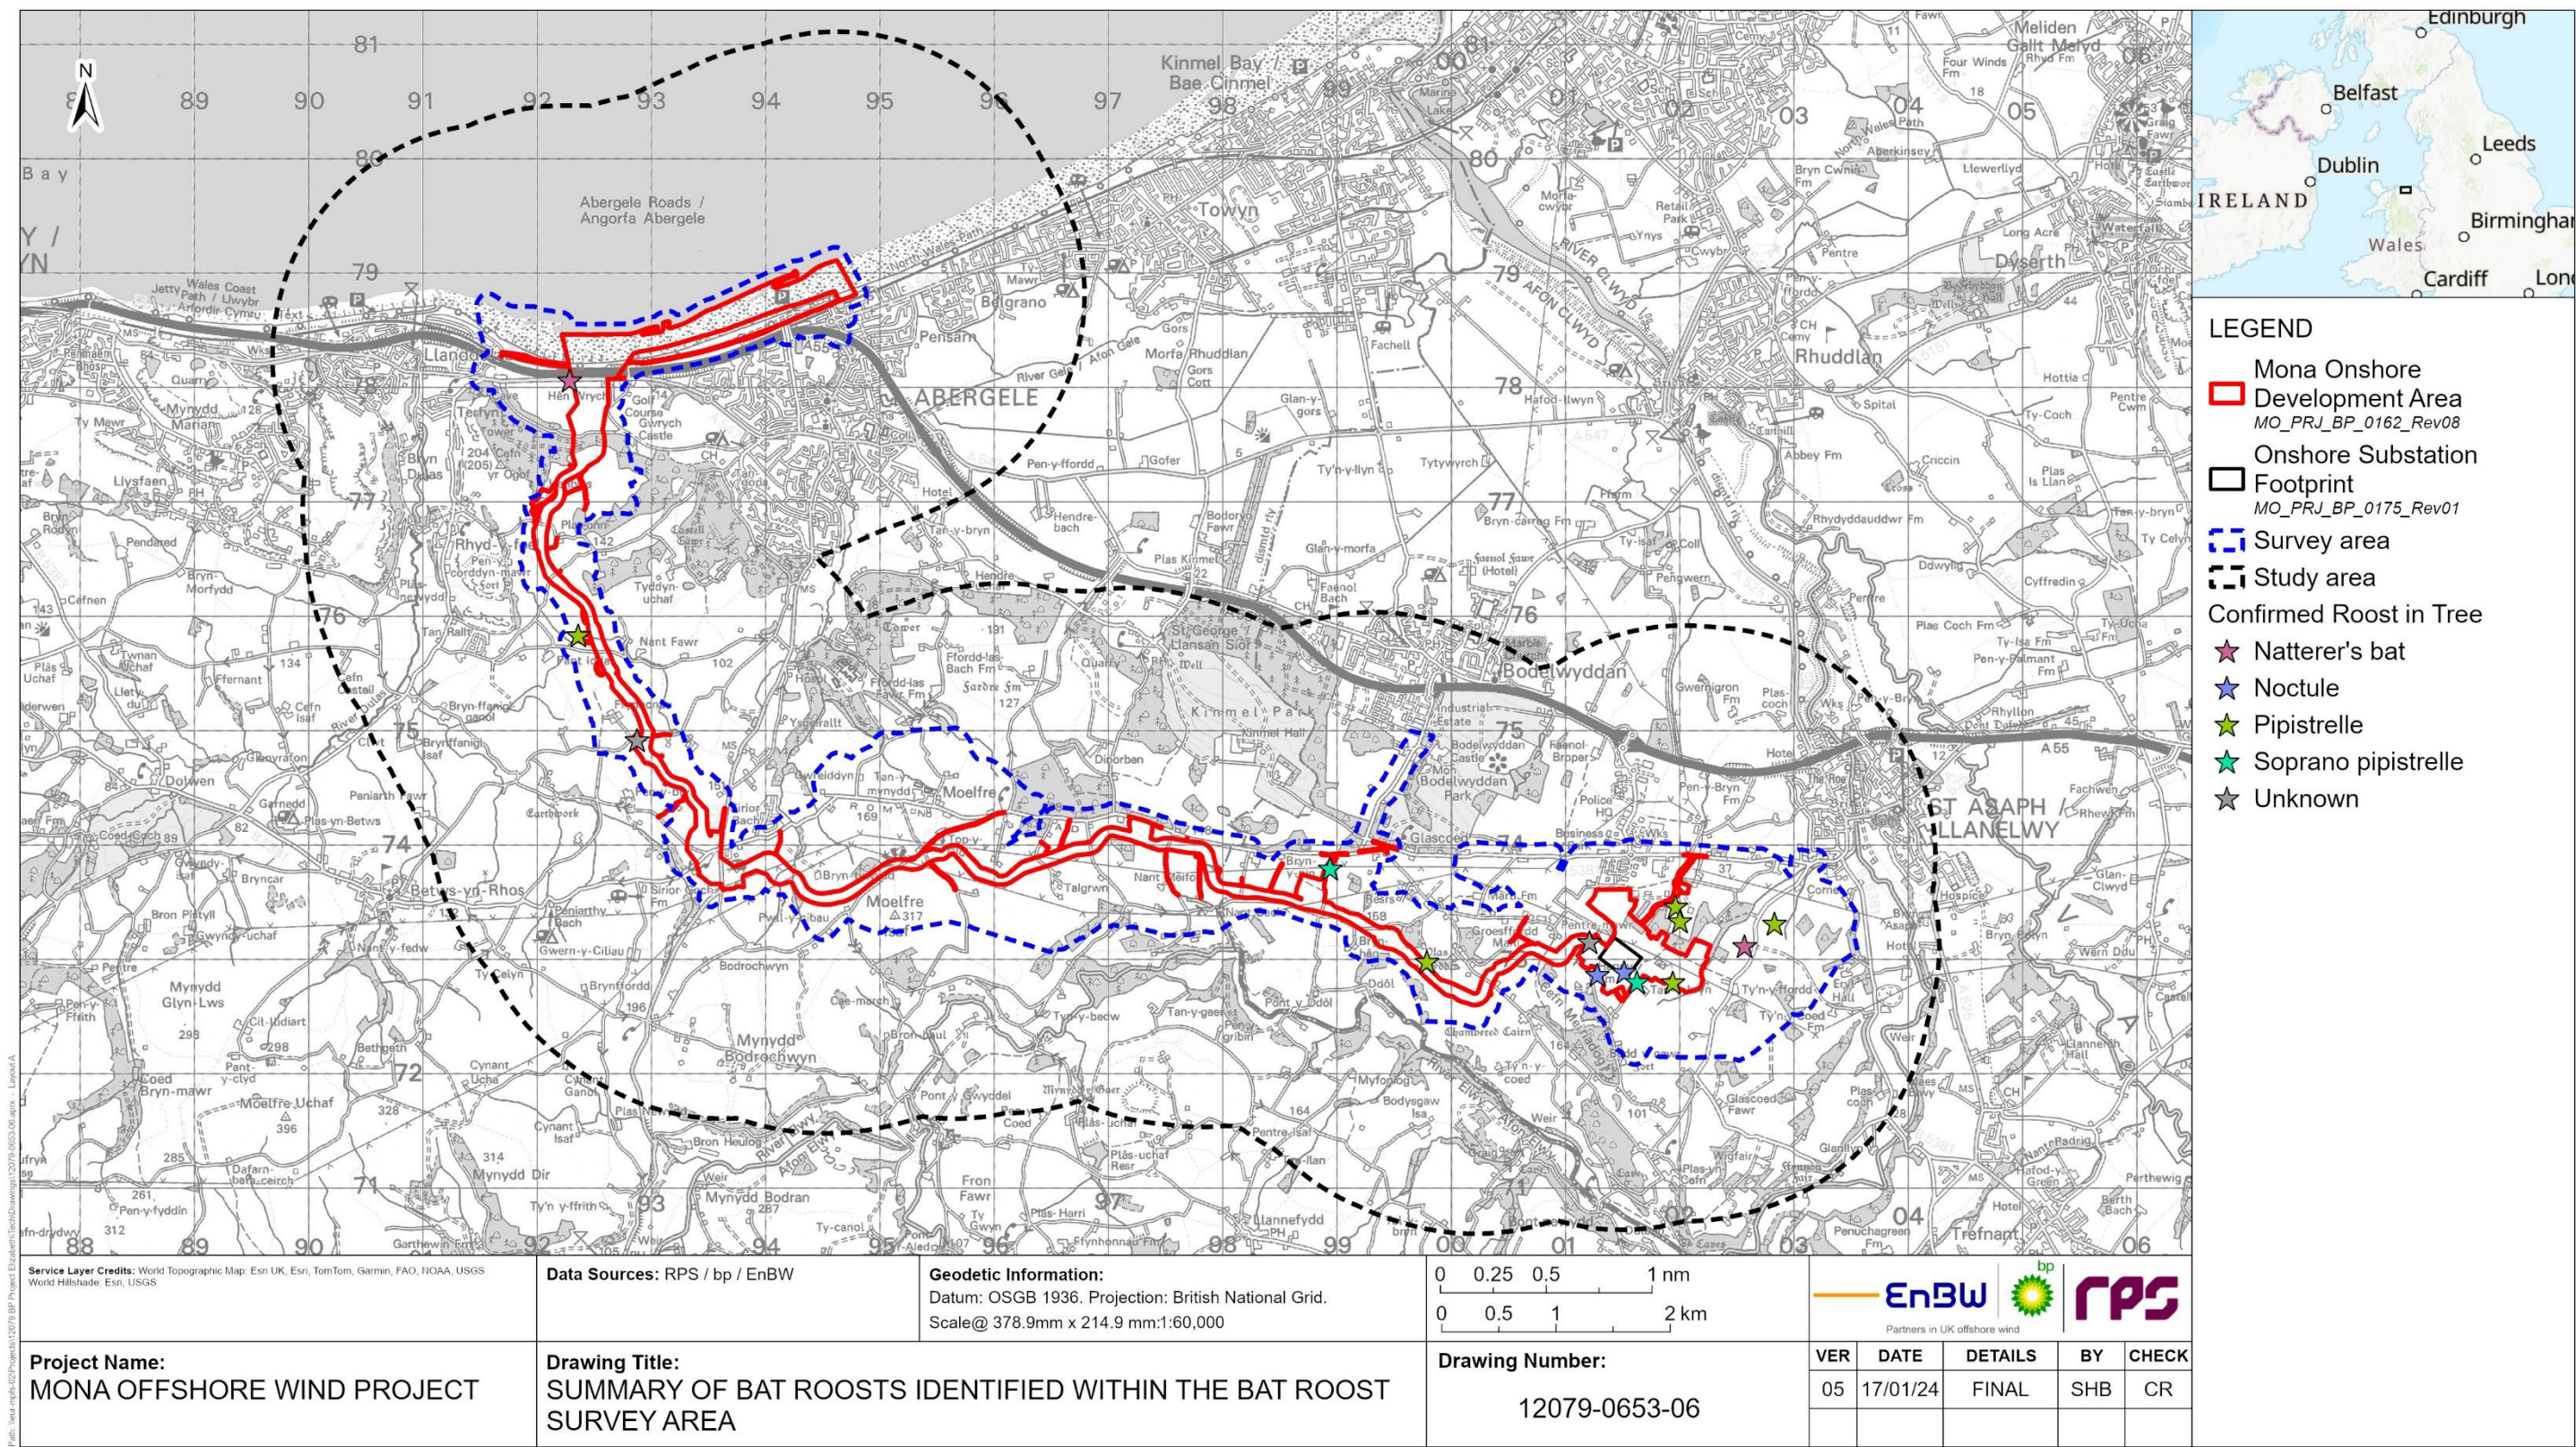

Figure 1.46: Summary of bat roosts identified within the bat roost survey area.

1.7 Summary

- 1.7.1.1 This technical report presents the results of the bat roost desk studies and the field surveys undertaken between in 2023 to inform Volume 3: Chapter 3: Onshore ecology of the Environmental Statement.
- 1.7.1.2 One internationally designated site, where bats are a designated feature, was identified 18.82 km from the bat study area, and one nationally designated site, where bats are a designated feature, was located 0.82 km from the bat study area. Both sites were important for lesser horseshoe bats.
- 1.7.1.3 Records from eight different species and 24 records of bats that could not be identified to species level were recorded within the bat roost study area in the last ten years. None of the records were within the Mona Onshore Development Area.
- 1.7.1.4 Fourteen bat roosts were identified during site-specific surveys. A summary of the bat roosts identified within the bat roost study area and survey area is shown in Table 1.6 and Figure 1.26 to Figure 1.28 of this technical report.
- 1.7.1.5 A total of 4890 trees were subject to a GLRA, 1061 of which were within the Mona Onshore Development Area. Of the trees within the Mona Onshore Development Area, 132 were considered to have high suitability for roosting bats, 352 as moderate, 304 as low and 273 as having negligible suitability. Two roosts were identified during GLRA, both located outside the Mona Onshore Development Area.
- 1.7.1.6 A total of 893 trees were subject to detailed inspection, of which 343 were located within the Mona Onshore Development Area. Thirteen bat roosts were identified or confirmed in trees during detailed inspections, two of which were inside the Mona Onshore Development Area.
- 1.7.1.7 A total of 24 structures were subject to a PRA. Of these structures, eight had high suitability for roosting bats, seven as moderate, nine as low and none as having negligible suitability. No roosts were identified during PRAs. Two of the structures were located within the Mona Onshore Development Area; both were walls with high suitability for roosting bats.
- 1.7.1.8 Dusk emergence surveys identified the presence of one roost of unknown species within the Mona Onshore Development Area and confirmed the presence of a noctule bat roost within the Onshore Substation Footprint.
- 1.7.1.9 The species recorded roosting within the survey area include soprano pipistrelle and unidentified pipistrelle species (likely common pipistrelle or soprano pipistrelle based on the size of the bats) which are both widespread throughout north/mid-Wales. Noctule and Natterer's bat roosts were also identified which are species that are widespread in many areas of north/mid-Wales but not as abundant in all (Reason and Wray, 2023).
