The site benefits from fencing along the whole perimeter. The entrance is locked outside of working hours. The site itself is located inside Hawarden Industrial Estate which implements its own security measures.

A further site assessment was made which took into consideration the layout, entrances, exits and vulnerable points. Based on the site assessment, a customized CCTV system was designed.

The system includes Ultra High-Definition cameras strategically placed for optimal coverage provision, a recording device, a monitoring station, and necessary infrastructure such as brackets, cables, control peripheral devices and power supplies.

The system effectively deters potential threats, provides real-time monitoring, and assist in investigations, ultimately ensuring the safety of the property, assets, and personnel.

The locations of the CCTV cameras are shown on the drawing below.

No lifeguards are intended on site.

## PLOT 15 CLWYD CLOSE HAWARDEN INDUSTRIAL ESTATE
