### 1. Introduction

The Closure Plan outlines the process by which the waste operation will be ceased on site and equipment decommissioned. The Site Condition Report is an integral part of the Closure Plan.

### 2. Closure Plan

The Closure Plan on complete cessation of activities will involve:

- 2.1. Removal and Disposal of Raw Materials and Products  
Any waste remaining on site at the time of permit surrender, will be sent to a suitably licensed recovery / disposal facility.
- 2.2. Disposal of Ancillary Materials  
Any other materials still remaining will either be sold or sent to a suitably licensed recovery / disposal facility.
- 2.3. Dismantling of Process Equipment  
All processing equipment (pumps, container, etc.) will be removed from site prior to permit surrender.
- 2.4. Confirmatory Analysis of Ground Condition  
Following completion of the above steps the ground condition will be assessed to demonstrate that there has been no increase in ground pollution throughout the life of the permit.
- 2.5. Surrender of the Environmental Permit  
Following completion of the above steps the Environmental Permit will be formally surrendered in accordance with prevailing legislation at the time.

### 3. Site Condition Report (SCR)

The steps described above will be supported by site condition report records that will be maintained at the site. The SCR will be updated throughout the life of the permit, in case new facts on the site condition emerge.

On the basis of the SCR the Company (Enveo Aston Ltd) will make an assessment of soil and underground water contamination. The Company will take measures to remediate the contamination until the soil and/or groundwater is returned to baseline condition in the event that the assessment indicates significant soil and groundwater contamination.

The Company will take additional actions to remove, control, contain or reduce hazardous substances so that, given the characteristics of the site and its future use, it does not pose a

risk to human health and the environment - where the levels of contamination identified in the baseline report pose such a risk.

A copy of the guidance and template application produced by Natural Resources Wales providing guidance of the records to be kept during the operational and surrender stages of the Environmental Permit. This is to ensure that updates and developments in the guidance are properly reflected in the plan. Checking for updates in guidance and updating the surrender plan to reflect these will be a part of the Site Closure Plan reviews.

#### **4. Records**

All records relating to the Permit, Closure Plan and SCR will be held in hard copy folder by the Company for the lifetime of the Permit.

All documents associated with the Closure Plan and SCR records will be submitted to the regulator to demonstrate that no adverse effect to the environment has occurred during the permit life time or if adverse impacts have occurred these have been remediated.

#### **5. Document Review**

The Site Closure Plan will be reviewed and updated accordingly at the following intervals:

- Where substantial changes to site infrastructure occurs;
- Where a Waste Permit variation occurs.
