

Management Review Meeting

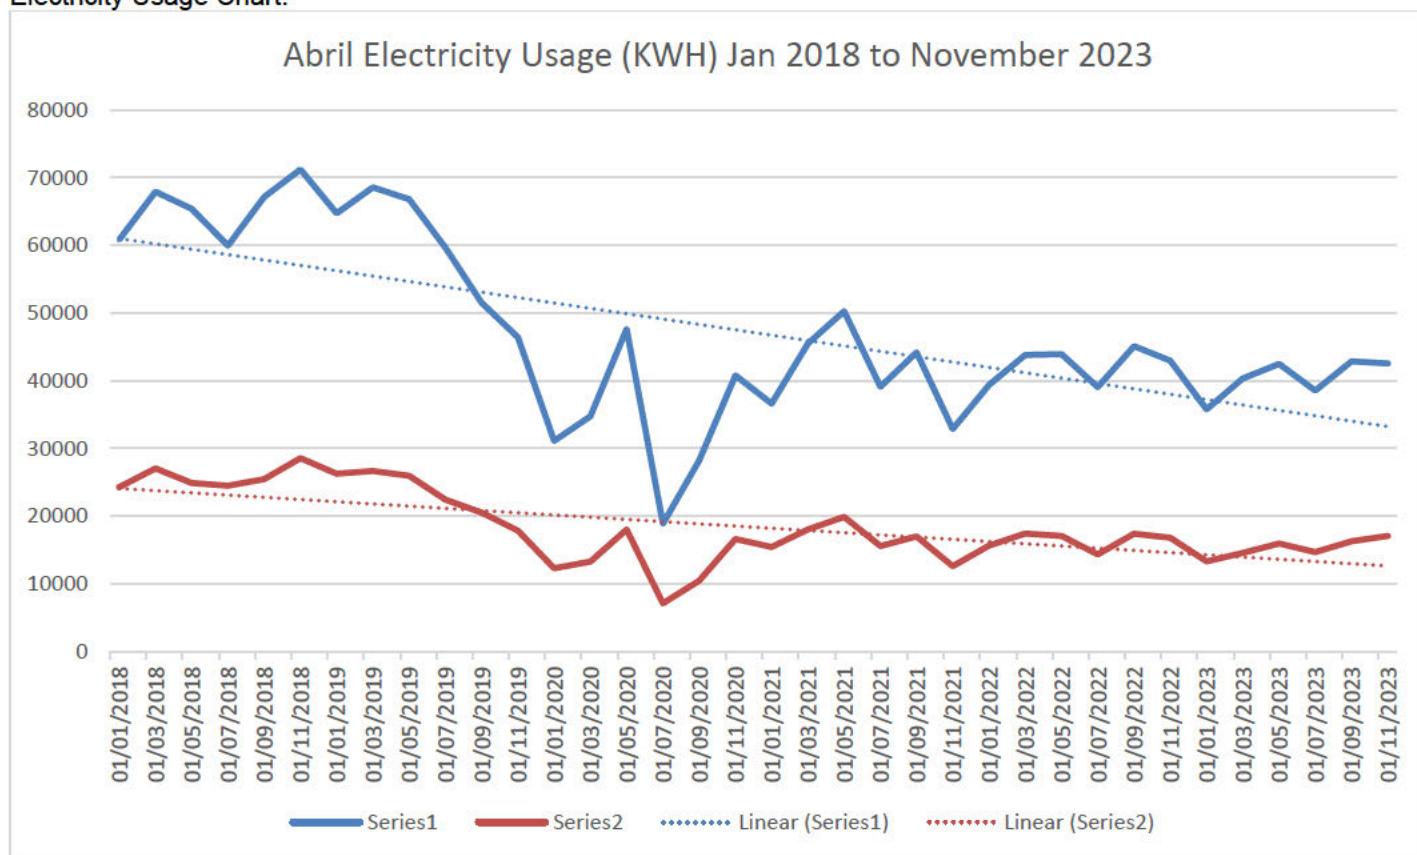

held on Wednesday 13th December 2023 at 11:00 am in the conference room and via teams.

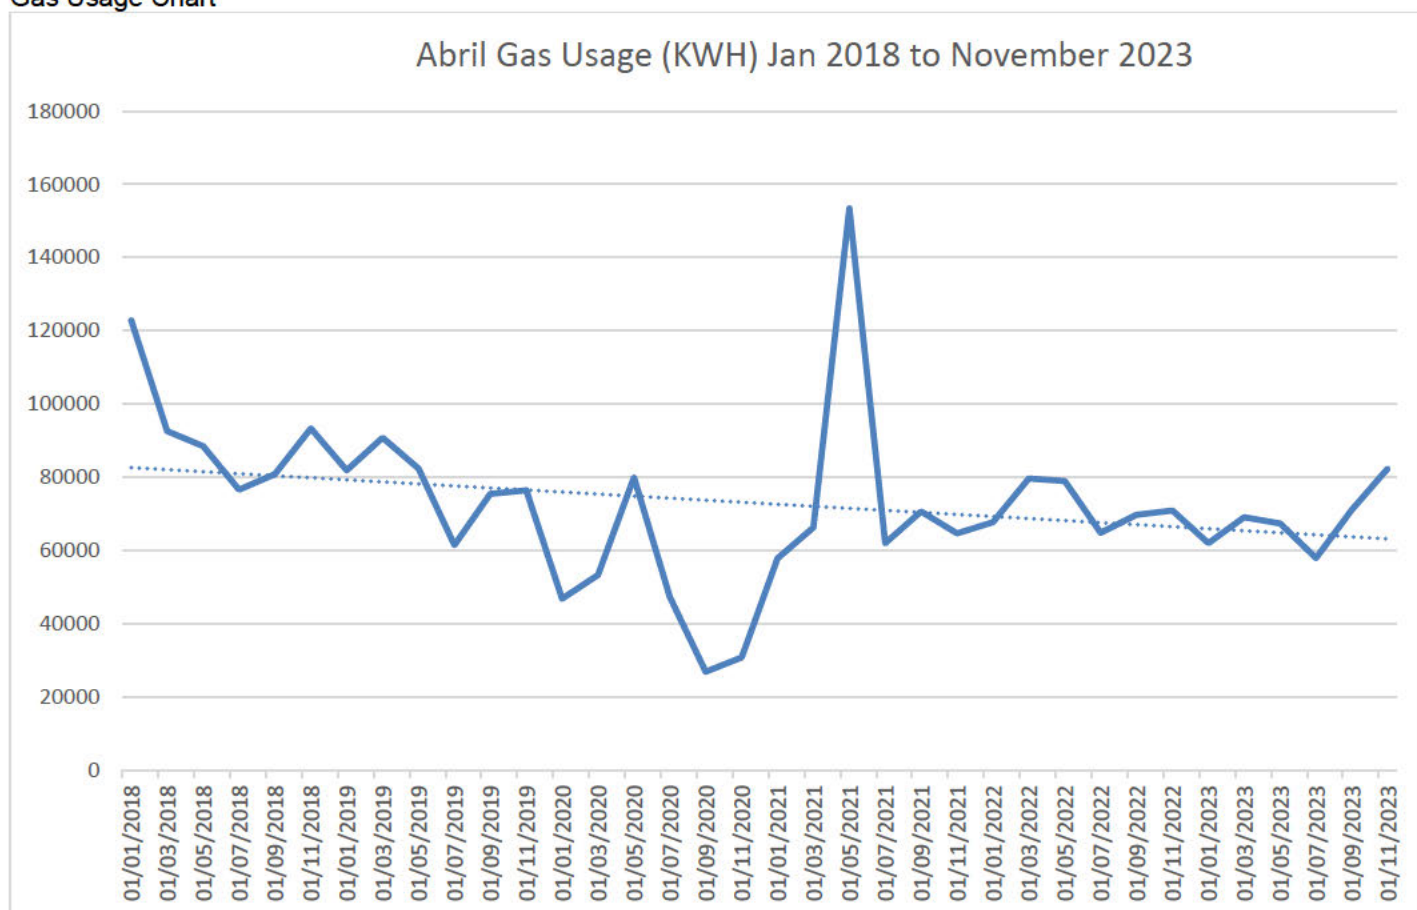

The meeting was conducted to follow up the issues and actions identified in the last review in September 2023 and record new actions to ensure ongoing compliance, system effectiveness, and continual improvement.

5.	Review of trends in performance including PPC Key Performance Indicators and customer satisfaction	Info	Action
	Energy consumption - The current limit is 120 KVA. Discussions have taken place regards the installation of new handling equipment – the limit of the incoming supply would likely be exceeded – feasibility of upgrading the power supply being investigated to see if 200 KVA is possible with current infrastructure. DJ stated that 200 KVA is possible using cabling works by Western Power, maximum power without infrastructure changes to be established – awaiting WPD site visit which has been delayed due to the pandemic, correspondence is very slow. On last contact WP sent a form for extra information, MT and NRad to liase with [REDACTED] for completion of this document. HMA questioned if the incoming KVA is recorded in the permit. Investigate is there is a requirement to inform NRW and/or amend the permit.		1.1.2 1.1.12
	Energy usage figures reviewed: Electricity – Day and night remaining steady trend and gas usage also steady trend – see graphs. A minor decline in usage due to reduced tonnage.	✓	

Electricity Usage Chart:

Gas Usage Chart

*peak for 01/05/2021 due to increased usage through March 2021, previous minutes suggest that reading was an exact reading rather than an estimated usage.
