the fact that the *in vitro* results are in good agreement with the *in vivo* results, it is likely that the *in vitro* results are a good approximation of the *in vivo* results. The *in vitro* results are also in good agreement with the *in vivo* results, which is a good indication that the *in vitro* results are a good approximation of the *in vivo* results.

the following are the fundamental principles which govern the design of the system:

- (a) The system shall be designed to meet the requirements of the user.
- (b) The system shall be designed to be flexible and adaptable to changing requirements.
- (c) The system shall be designed to be secure and reliable.
- (d) The system shall be designed to be efficient and cost-effective.

The system shall be designed to meet the requirements of the user, to be flexible and adaptable to changing requirements, to be secure and reliable, and to be efficient and cost-effective.
