Briefly describe what you want to do

Apply Marine Grade Pointing Mortar To The Voids Within The Masonry Stones.

Remove weed from the damaged stepped area, the lower landing area and any areas where mortar application is required.

Again further investigate any missing mortar void depths and record any new findings and utilise a small pipe camera to look into the back of the mortar joints to see if they open to larger voids and if the back of the masonry stones are visible or not.

Apply high performance mortar to the deep voids which exist within several courses the mortar joints. These are located at the masonry stones just above seabed on the NE wall adjacent the half sheet piles. The voids are 0.8 - 0.9m deep and the mortar needs to be fully compacted starting each run from the back of each mortar joint and working forward.

As required apply mortar repairs to any areas around the damaged section of stairs.

Finally, several small mortar voids exist adjacent the piles on the NW wall and will be included as per above.

When do you want the licence to start?
