

# Summary of Proposed Management System

## Former Ford Bridgend Engine Plant

Our Management System will employ a Monitoring & Maintenance plan that we believe is consistent with NRW's requirements.

Our plan will include:

- Introduction – setting out the project background and objectives.
- Site Setting – including the site location and environmental setting.
- Groundwater Treatment Overview – technology used, screening criteria with direct reference to the permit.
- Monitoring Objectives – setting out the objectives of the water treatment plant.
- Monitoring Point Locations – clear definition of any monitoring points within the treatment system.
- Monitoring Frequency & Determinants – groundwater and water treatment plant monitoring programmes.
- Inspection & Maintenance – monitoring and maintenance of the treatment plant, environmental protection measures and contingency measures/plans.
- Reporting & Review – defining the frequency of reporting and how a review of the system will be used to improve the efficiency of the plant.
- System Decommissioning – providing a clear programme for the decommissioning of the treatment system.
