Shield Environmental Services Ltd. Waste Transfer Station Yearly Report 2021 - PC 4.2.1

Conditions of the Waste Transfer Station have not changed greatly during 2021

We have 2 asbestos waste skips in total, both are used for mixed asbestos waste and are kept securely locked except when in use.

We have approximately 2 - 3 skips taken to landfill each Quarter. Haulage Company Atlantic Recycling transports our skips to Viridor Waste Somerset, Walpole Landfil, Somerset, TA6 4TF for disposal.

The asbestos waste received is generated from our own internal waste removal business. All waste is dealt with in a controlled manner, where the operatives don blue overalls gloves and masks while transiting the waste to the skips.

Air monitoring is carried out by an independent analytical company Normandy Asbestos Services on a Quarterly basis, copies of reports can be forwarded on request.

All required waste returns are submitted to Natural Resources Wales on a quarterly basis

No contamination of the site has occurred during the year and no decontamination has been required. The WTS is inspected and cleaned daily and a log kept.

There is CCTV in place which records the transiting of the waste.

No alterations have been made to the Waste Transfer Station within the past year.

Submitted 17th January 2022
