Introductory note

This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

This variation updates the permit to incorporate three new ovens (260kWth input each) and their associated emissions to air (A11, A12 and A13). No additional monitoring is proposed for the new ovens in table S4.1.

The operator is also expanding the site boundary to include the new temperature-controlled storage area which is an extension of the existing factory building. Cooling for the storage extension will be run from the existing ammonia-based refrigeration plant. Two new chillers, two new blast chillers and a freezer system for chill/frozen storage control will also be introduced.

An attenuation basin will be installed to accommodate storm water from the new extension. The site drainage plan has been updated to collect clean runoff water and contaminated water from activities within the extension. The company's registered address has also been updated.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
