## 4. Details of our assessment

A routine sample taken on 08/12/2025 returned a suspended solids result of 18.5 mg/l against a permit limit of 18 mg/l.

Please can you advise as to the reasoning for this failure by 31 January 2026.

### **Response received from Operator 14 January 2026**

*We believe that a reduced clarity of discharge post-sand filter would have been caused by a potential reduction in air flow caused by an intermittent in-line solenoid fault at the air compressors.*

*The solenoid has since been replaced for new and full airflow is operationally consistent.*

**Closed.**
