Harbour Improvements

Precautions and Mitigating Measures

Precautions

1. We will select Contractors with the right skills attitudes and track records
2. The Contractors will be comprehensively briefed and closely supervised.
3. Portable generator will be modern and to a high specification
4. All vehicle will be inspected for leaks before being allowed close to site every day. No vehicle will access the sea bed.
5. Spill kits will be available close to the generator,
6. No re fuelling will be permitted on beach or within 20m of beach
7. Scaffolds (if used) will be man portable and will not be left in place.
8. When it is feasible to use cordless power tools they will be used

Phasing

No work will be carried out when birds need a high tide roost.

Work will be timed to be carried out after the song birds have bred and before the winter migrants arrive. Target date 14th September 2019

Mitigation measures

1. Mud movement will be minimised
2. Re located mud will be spread over existing mud
3. Re located mud will be placed so it is always covered by the tide
