

## **Environmental Impact Assessment (Agriculture-Wales) 2017**

### **Assessment of land-spreading application ADT 27-26, Little Bank Farm**

After assessment, we have concluded that this application for land-spreading waste for nutrient recovery is exempt from the EIA Regulations as it is a routine operation that has been undertaken on this land for several years.

Further assessment shows that:

- these fields were all registered for deployment in 2024 and in previous years
- are actively farmed
- The land is routinely ploughed/reseeded, with or without arable break crops
- Is routinely limed

This can be verified by arial view maps showing that the fields are actively managed farmland, and this is confirmed by the farmer.
