Same terms renewal

Are you applying for a same terms renewal?

Yes

Use this section to show us how you have calculated the amount of water you require. This should include details of your operational regime (for example, number of hours and days you intend to abstract, number of units produced or area to be irrigated). We use this information to determine if the volumes you propose to abstract are appropriate for the purpose. Depending which industry you are in, you may need to provide additional information below.

If your water usage has been lower than your licensed volumes, you will need to provide additional information to demonstrate your continued need for the water, for example, additional justification or a Business Case.

Same terms renewal.

To measure the level of water abstracted each month we take a measure of the run time of the pumps we have on site, measured in hours. This is then multiplied by the flow rate of the pumps in each area. The flow rates are taken at regular intervals to ensure accurate results.

$((\text{hours of operation} \times \text{flow rate}) \times 60 \times 60) / 1000$ We estimate abstraction quantities based on hours of usage across the week and flow rates (i.e weekly total/5 days in the week)

We will be abstracting more during the winter months due to wet weather filling excavations and ground water being higher during heavy rainfall. In the summer periods we could find that the areas needing abstracting will not need any abstracting due to no water being present in excavations. If there is no water present during excavations then we will not be abstracting any water. This can lower/alter the water usage over the course of a year. We do not exceed our Permit conditions at any time.
