Introductory note

This introductory note does not form a part of the notice.

The following notice gives notice of the variation and consolidation of an environmental permit.

This is a substantial permit variation for the removal of the combined cycle gas turbine (CCGT) activity and all associated ancillary equipment. All directly associated activities and emission points to air and water associated with the CCGT activity and ancillary equipment in the permit were removed. Also, all requirements related to the operation of the CCGT activity as a Large Combustion Plant (LCP) have been removed from the environmental permit as a result of this variation.

This variation authorises the operation of the installation as an activity involving the combustion of natural gas in 11 reciprocating engines for less than 1500 hours per year, as a five-year rolling average, with no more than 2250 hours in any one of those years.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
