A routine monitoring sample was taken of the final effluent on the 15 September 2026 by a representative from Natural Resources Wales.

The sample results are:

Ammonia had a concentration of 9.55 mg/L compared to a permit limit of 5mg/L. This has resulted in a second C3 failure which has the potential to have a minor environmental impact.

The result for Biological oxygen demand (BOD) and suspended solids were below their relevant permit limits.
