Hello Donald

I am employed by Jennings Building & Civil Engineering Limited which is one of the leading contractors on Sea Defense projects in North Wales and personally I have been involved in Sea Defense projects with 40+ year'a experience.

In looking at the photos provided firstly I would ask the questions have there been any changes in the profile of the beach levels and has there been any movement in any of the Rock Armour which was placed since our visit in 2023? If both these points have not changed my initial comments would be "leave well alone".

If you decide to move any of the Armour at this stage I would be very concerned that due to the waves reaction on high tides and the right wind direction this could cause problems such as changing beach levels and eroding/undermining the weakest point along the sea defense affecting the "integrity of the land behind the revetment/sea defense" especially on one of the photographs

At this stage my view is not to move any of the Rock Armour and with the passage of time since 2021 this has served its purpose and proved successful.

Another point is that NRW wouldn't have signed this off if they had any concerns about the integrity of the sea defense.

Please don't hesitate to contact me if I can be of further assistance.

Kind regards

Dewi Jones

Good evening Dewi. Thank you so much for coming back on this

You can reach me on the following number:

07341 368410

It is my mother's mobile.

It would be easier if I could phone you though.

Are you able to indicate time tomorrow when I would be able to call?

All the best

Donald
