

Schedule 6 - Notification

These pages outline the information that the operator must provide.

Units of measurement used in information supplied under Part A and B requirements shall be appropriate to the circumstances of the emission. Where appropriate, a comparison should be made of actual emissions and authorised emission limits.

If any information is considered commercially confidential, it should be separated from non-confidential information, supplied on a separate sheet and accompanied by an application for commercial confidentiality under the provisions of the EP Regulations.

Part A

Permit Number	BR9383ID	Notification Reference	EP_EX_228
Name of operator	Knauf Insulation Ltd		
Location of Facility	Chemistry Lane, Queensferry, Deeside, Flintshire, CH5 2DA		
Time and date of the detection	07:30 20 th June 2019		

(a) Notification requirements for any malfunction, breakdown or failure of equipment or techniques, accident, or fugitive emission which has caused, is causing or may cause significant pollution	
To be notified within 24 hours of detection	
Date and time of the event	17:00 18 th June 2019
Reference or description of the location of the event	Low emission readings from plant start up on 18 th June and continuing at the time of this report (0830 20/6/19)
Description of where any release into the environment took place	No known release above permitted levels.
Substances(s) potentially released	NOx, SOx, CO and particulates from Emission point A, Cupola stack after oxidiser
Best estimate of the quantity or rate of release of substances	The cupola and enetex oxidizer have been operating normally since start up. There were process interruptions on the cutting part of the line but these were dealt with normally at the hot end of the plant with no indication of any effects on emission control from emission point A. Emission release is believed to be at normal levels.
Measures taken, or intended to be taken, to stop any emission	Initial investigation suggests a problem with the Durag probe (stack temperature, pressure and dust measurement device). Maintenance dept are checking the probe.
Description of the failure or accident.	Incorrect readings for all CEMS monitored emissions from stack A. This appears to be an instrumentation issue. Investigation is ongoing.

(b) Notification requirements for the breach of a limit	
To be notified within 24 hours of detection unless otherwise specified below	
Emission point reference/ source	
Parameter(s)	
Limit	
Measured value and uncertainty	
Date and time of monitoring	
Measures taken, or intended to be taken, to stop the emission	

Time periods for notification following detection of a breach of a limit	
Parameter	Notification period

(c) Notification requirements for the detection of any significant adverse environmental effect	
To be notified within 24 hours of detection	
Description of where the effect on the environment was detected	
Substances(s) detected	
Concentrations of substances detected	
Date of monitoring/sampling	

Name*	G A Jones
Post	Process and Energy Manager
