Re: Availability of NOx Reduction techniques

Dear Matthew,

In line with the requirement of section 4.2.6 of our Permit, please find attached the report submitted in 2016 reviewing the availability of NOx reduction techniques applicable to our current Combined Heat and Power (CHP) plant.

We believe that the comments in this report are still valid for the currently installed equipment.

The final paragraph of the report makes reference to the development of a future strategy for CHP at the Broughton site. To this end, Airbus is currently in discussion with a possible supplier regarding the complete replacement of the existing CHP plant with new equipment which will incorporate up to date technology.

Should you have any further questions please do not hesitate to contact me.

Yours sincerely,

Andy Denton
